

MPS426 is a low-cost surface microphone for aerodynamic noise measurements. It is widely used in ground vehicle and aerospace to investigate the wind induced noise. It can be easily mounted on surfaces using double sided adhesive tape.

The MPS426 has ICCP preamplifier and can be connected to any ICCP input channel. It has 5 m cable with SMB connector.

The MPS426 has a high sensitivity of 50mV/Pa and a flat frequency response between 20 Hz and 20 kHz.

The TEDS version of MPS426 is also available. It has a built-in TEDS chip written with such information as model, serial number, sensitivity, reference frequency, and etc.

MPP201 is a probe microphone with 1 mm diameter steel probe. It is suitable for measuring sound pressure in the tiny space or the extreme environmental conditions. The MPP201 is supplied with four probe lengths. For each probe length, the calibration chart is provided.
